

Instructions for Replacing Thermocouples

CLICK ANYWHERE on THIS PAGE to RETURN to THERMOCOUPLE INSTRUCTIONS at InspectApedia.com

Installing 098514-01 and other similar thermocouple kits.

- 1. Turn gas off to appliance.
- 2. Remove front panel from heater by removing the screws holding front panel to the cabinet.
- 3. Remove thermocouple wire from gas valve base by turning fitting counter clockwise with a 5/16" wrench (see Figure 1).
- 4. Locate the pilot assembly and, with a Phillips screwdriver, remove screw that holds the bracket for the thermocouple and igniter (see Figure 2).
- 5. Remove thermocouple and replace with new thermocouple.
- 6. Replace bracket and tighten screw.
- 7. Finger tighten thermocouple wire fitting at base of gas valve. With 5/16" wrench, turn fitting 1/4 turn clockwise.
- 8. Replace front panel on heater.
- 9. Turn gas on to appliance.

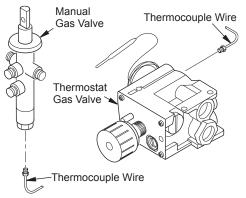

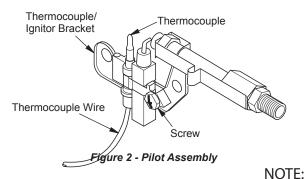

Figure 1 - Thermocouple Connection to Gas Valves

Installing 110186-01 and other clip in style thermocouple replacement kits.

- 1. Turn gas off to appliance.
- 2. Remove front panel from heater by removing the screws holding front panel to the cabinet.
- 3. Remove thermocouple wire from gas valve base by turning fitting counter clockwise with a 5/16" wrench (see Figure 1).
- 4. Locate the pilot assembly and remove the clip that holds the thermocouple in place (see Figure 3). Slide thermocouple down and remove from bracket.
- 5. Insert new thermocouple into pilot bracket as high as it will go. Slide on retaining clip.
- 6. Finger tighten thermocouple wire fitting at base of gas valve. With 5/16" wrench, turn fitting 1/4 turn clockwise.
- 7. Replace front panel on heater.
- 8. Turn gas on to appliance.
